NON-COMMUNITY HOSPITALS

INTRODUCTION

In addition to the 51 community hospitals in South Dakota, there were 17 non-community hospitals in 2005. Each hospital provided varying degrees of emergency, acute, intensive, skilled nursing or specialty care. All non-community hospitals have the capability of providing acute care, which differentiates them from nursing facilities, which do not have that capability.

RESOURCES

Facilities

Hospitals are categorized as non-community hospitals because of access requirements or the specialized nature of the care they provide. In 2005, South Dakota's 17 non-community hospitals were comprised of two Veteran's Administration hospitals, five Indian Health Services hospitals, and 10 specialized hospitals. Of these hospitals, the only hospitals licensed by the state are the 10 specialized hospitals.

NOTE: The number of non-community hospitals that submit their AHA Survey in any given year fluctuates greatly, making it difficult to track the trends in data related to non-community hospitals. Therefore, the data for non-reporting, non-community hospitals was extrapolated in 2001, 2002, 2003, 2004, and 2005 to allow the comparison of trends for non-community hospital resources and utilization statistics. The report notes the instances where the data is extrapolated by bolding the data and shading the area around it. In addition, a note is added below the table to indicate further that the data has been extrapolated.

Beds

Table 17, below, displays the number of beds per facility for the years 2001 to 2005. From 2004 to 2005, the total non-community hospital beds in South Dakota decreased by 29 beds or 3.4 percent. Table 18, page 23, compares the number of beds in South Dakota non-community hospitals and community hospitals. During the past five years, the percent of hospital beds that are housed in non-community hospitals has held steady around 22 percent.

UTILIZATION

General Trends

Table 19, below, tracks selected utilization statistics for the non-community hospitals from 2001 to 2005. Utilization showed a decrease in beds set up and staffed and an increase in discharges (see Appendix A for explanation of discharges) and a decrease in inpatient days for 2005.

Table 19
Selected Statistics for South Dakota Non-community Hospitals, 2001-2005

YEAR	BEDS SET UP AND STAFFED	DISCHARGES	INPATIENT DAYS	AVERAGE LENGTH OF STAY
2001	811	29,892	167,545	5.61
2002	842	20,133	148,839	7.39
2003	825	13,087	153,329	11.72
2004	854	12,505	159,795	12.78
2005	825	12,872	147,106	11.43

NOTE: The shaded data in Table 19 are based on extrapolated data.

Discharges

Table 20, page 24, displays the non-community hospital discharges by facility. The five-year high during the period presented occurred in 2001. The substantial decrease in discharges in 2003 is due to clarification of reporting requirements. In 2005, there was an increase in the number of discharges by 367 discharges or 2.9 percent. Table 21, page 24, shows total discharges for community hospitals and non-community hospitals.
